composition***

***Performs 4 full-body
measurements***

***Open protocol format (API)
for peripheral devices***

***Free Healthy Edge® Lite
software***

***Windows/Garmin/iPhone
compatibility***

BC-1100F

FITSCAN RADIO WIRELESS BODY COMPOSITION MONITOR

Body composition monitoring is an essential tool for precisely measuring your body's inner health. FitScan's new **FDA cleared** BC-1100F FitScan Radio Wireless Body Composition Platform, used in conjunction with a compatible receiving device, provides in-depth information about your body. This information allows you to accurately monitor the impact of your diet and fitness program.

Ultra low power radio wireless ANT+™, the FitScan BC-1100F by Tanita will communicate to a wide range of remote displays including your personal computer employing an "open" protocol format; transmitting weight, body fat%, body water%, and muscle mass. This data can be monitored and recorded on your personal computer using Tanita's (**FREE**) Healthy Edge® software. This stylish platform does not have a display so your health statistics can be recorded, graphed and analyzed privately as they are wirelessly transmitted to a PC, a Garmin Fitness Watch, or other ANT+ enabled devices.

Tanita and Garmin Ltd., the global leader in satellite navigation, have collaborated to bring consumers the ability to securely and wirelessly transmit data to Garmin Watches. When using this wireless technology, the readings of weight, body fat and body water are wirelessly displayed on the watch, while nine full body readings are stored in the watch. When in range of a consumer's computer, the information is automatically transmitted to the computer using the wireless USB Stick and captured with Tanita's Healthy Edge® Software and Tanita free widget for Mac or sent to Garmin Connect.

Tanita Connectivity

The BC-1100F *communicates* using ANT+™ Radio Wireless (with pairing) to transmit securely to multiple compatible display devices, such as:

PC

Healthy Edge® Lite Software
