

HC-312F

FITSCAN BREATH CHECKER

LCD Indicate Breath Odor Level

The HC-312F Breath Checker is an innovative palm-size monitor that detects and measures the presence of annoying or embarrassing breath odors. Simply turn it on, breathe into the sensor, and a reading appears on the digital display. Measures odor in seconds, with results displayed in six color coded levels.

The HC-312F uses a Semi-Conductor gas sensor to measure the amount of volatile sulfur compounds (VSCs) given off by bacteria. The sensor is less sensitive to odors given off by food and drink, and you should wait at least 10 minutes after eating before testing.

Easy to read and operate. Convenient and discrete to use, 4.4" X 1.4" X 0.7" and weighing only 2.6 oz. Powered by one 2 AAA batteries (included). Product life 1,000 measurements (can still use the detector beyond this period, but reading accuracy cannot be guaranteed).

Specifications:

- ✓ Detects and measures the level of bad breath odor in just 9 seconds
- ✓ Shows breath odor in one of six levels, with color coded backlight
- ✓ Small enough to fit discreetly into pocket or purse
- ✓ Power Supply: 2 x AAA (included)
- ✓ Dimensions: 4.4" x 1.4" x 0.7"
- ✓ Weight: 2.6 oz
